Product Overview

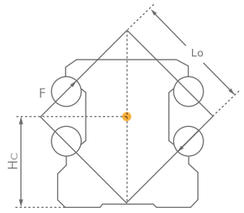
ARC/HRC/ERC Product Characteristics

The **cpc** ARC/HRC/ERC Linear Guide Series uses the O-type arrangement for the four row ball circulation design. The contact angle between the rail and ball is 45 degrees, and can realize the 4 directional load effects. **cpc** places special emphasis on strengthening the Arm length(Lo), so when sustaining external force F, will have even higher Mr value to increase the rigidity and static moment capability.
In addition, the runner block for the same size uses larger and more balls, so will outperform competitor's models by 10% to 30% regarding load capabilities. The products have characteristics of high load, high moment, and high stiffness.

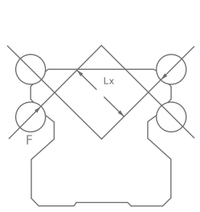
Unit:mm

Mode Code	Lo	Hc
15	12.4	9.35
20	16.4	12.5
25	19.5	14.5
30	24.0	17
35	30.4	19.5
45	38.2	24
55	43.1	28.5

F = Mr/Lo(Lx)



O-Type Arrangement



X-Type Arrangement

Inner Lubrication storage Pad (Upper)
- Length of the Runner Block will not be increased
- Full lubrication contact with balls, suitable for short stroke movement.

End Cap
- All-Round lubrication holes system

High abrasion materials end seal
- Standard high dust proof seal
- Low friction seal

Inner Lubrication storage Pad (Bottom)

Ball chain
- Patented design of reverse operations
- Quiet and prolong the service life

Stainless steel reinforcement plate
- Total scraping of objects above 0.3mm
- Increase X-axis direction force capacity

- High Dynamic Load and High Load capabilities
- Excellent dynamic performance: Reach Vmax 10 m/s Reach αmax 450 m/s²
- Can provide counterbored holes from the top and tapped mounting holes from the bottom rail
- Can provide special surface treatment

Product Design (Standard)

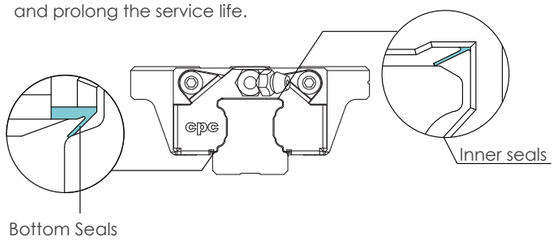
Dustproof design

Inner seals

The newly designed inner seals, can protect foreign objects from sliding into the rails while maintaining low friction. It can also allow the lubrication oil to be maintained inside the runner block and prolong the re-lubrication interval.

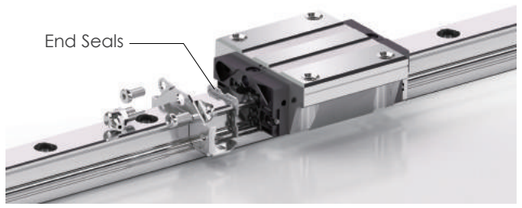
Bottom Seals

The bottom seals can prevent foreign objects from entering the bottom and prevent lubrication from leaking out. With full sealing design, it reduces the amount of oil usage, prolong the re-lubrication interval, and prolong the service life.



End Seals

The **cpc** double lips type end seals can prevent foreign objects from entering from the side and preventing lubrication oil and grease from leaking. The flexibility of the engineering plastic material has better friction resistance ability and better prevents cracking characteristics than typical NBR plastic.

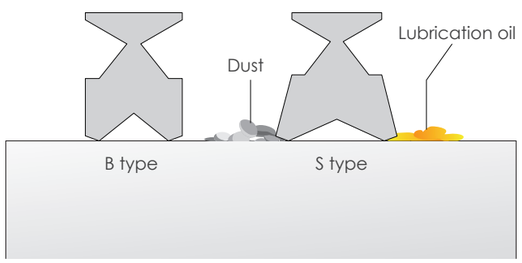


Standard seals (S)

Directly in contact with the rail surface, having better dustproof and lubrication holding capabilities. **cpc** recommends using this type of seals in environments that is exposed for long durations to high dusts and saw wood dust, etc. The friction will be higher than B type seals (low friction seals)

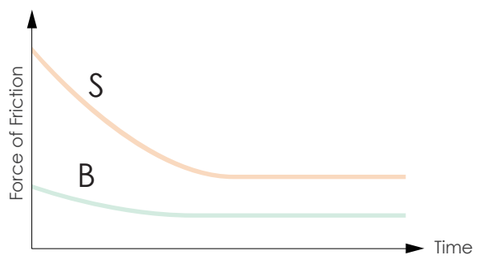
Low friction seals (B)

Suitable for most conditions, with slight contact with the rail, and having both scraping function with low friction.



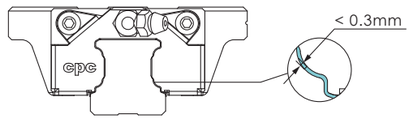
Comparison of friction of seals

The friction will be the highest on new linear rails. After short period of operation, friction will be reduced to a constant level.



Stainless Steel Reinforcement Plate

With clearance between rail profile of no more than 0.3mm, the plate can scrape large items such as iron filings to protect the end seals



Average Friction of Block

Below is the friction table for Block Body and End Seal under the condition of without any grease

Unit : N

ARC/HRC/ERC							
Block Type	Friction caused from ball bearing				Bottom Seals + Inner Seals	End Seals (2 sides)	
	Preload Class					S-Type Standard	B-Type Low friction

+) End Seals (2 sides)
Block friction

Product Design (Standard)

Saw wood dust Test

Test content

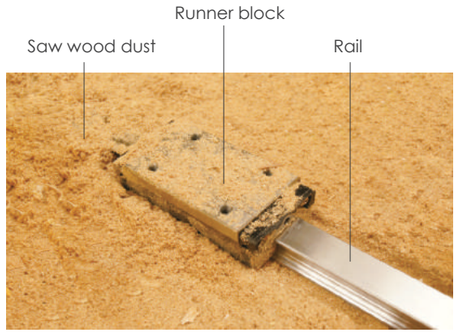
This test uses a total of 4 groups of products (using 2 rails match with 2 lubrications methods) by putting in saw wood dust and moving them within.

Rail

1. Tapped from top rail plus hole plugs (AR)
2. Tapped from bottom rail (ARU)

Runner Block

1. Installation of standard seals (S), using grease
2. Installation of lubrication storage Pad and standard seals (SZ), using grease



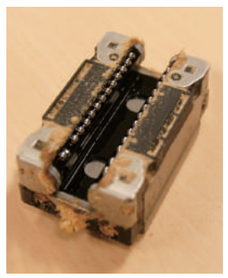
Testing conditions

1. Stroke = 600mm
2. Total testing stroke = 30m

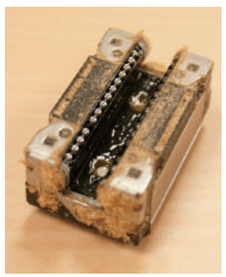
Test items

1. If Saw wood dust enters the inner parts of the runner block
2. If Saw wood dust enters the ball raceway

Test results



Tapped from bottom (oil)



Tapped from bottom (grease)

Checked Item / Installation status	Saw wood dust enter inner part of runner block	Saw wood dust enter ball bearing runner area
ARU Rail SZ Type Runner Block (Grease oil)	No	No
ARU Rail S Type Runner Block (Grease lubrication)	No	No
AR Rail SZ Type Runner Block (Grease Oil)	Yes (belly area)	No
AR Rail S Type Runner Block (Grease Lubrication)	Yes (belly area)	No

Test result

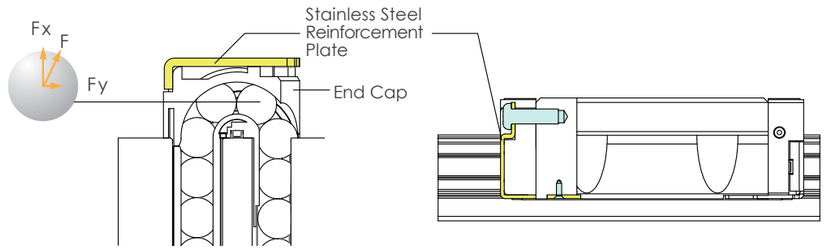
- The Tapped from top rail has hole plugs, leading to unevenness of rail, allowing some saw wood dust to enter the runner block belly area. The 2 sides of the runner block belly area is protected by stainless steel reinforcement plates and end seals that completely protect the ball bearing, so the ball bearing runner area is fully protected from Saw wood dust.
- The tapped from bottom rail has even rail surface, so the ball bearing runner area is fully protected from Saw wood dust.

Stainless steel reinforcement plate (Patent)

Both sides are available for scraping function

Using 2 stainless steel reinforcement plates, the L type design can fasten the screws onto the top and bottom of the runner block, reinforcing the rigidity of the end caps and cladding.

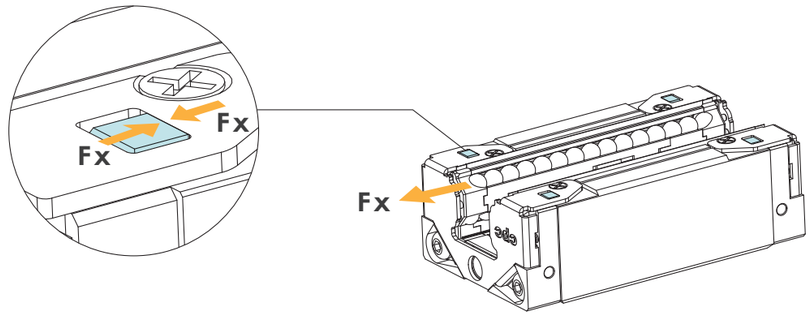
The clearance between the rail profile with the seal design is below 0.3mm, reinforcing the steel plates while having scraper functions.



Function of high speed operation

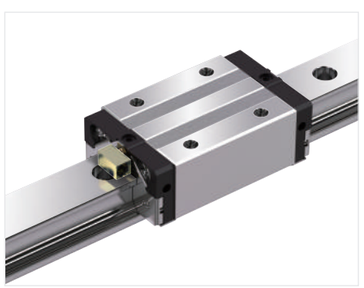
The ARC/HRC/ERC type uses the stainless steel reinforcement plates to strengthen the bottom latches, while increasing X-axis direction force capacity, and increasing operation speed.

Vmax >10 m/s αmax >450m/s²



All-direction Lubrication Nozzles

On the top, bottom, and sides, there are oil injection nozzles designed, the upper runner block comes with O-ring seal, and easily complete the oiling from top. Diversified comprehensive oil injection methods, suitable for installation axial and oil injection methods.

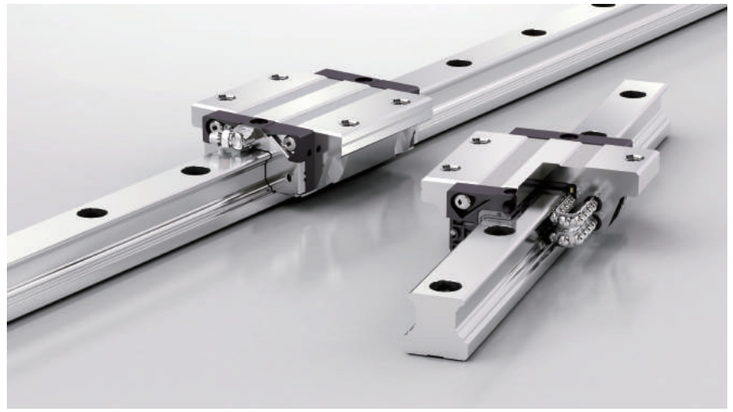


Product Design (Option)

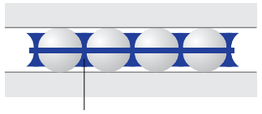
Low noise, high quality and high speed design ball chain (Patent)

Ordering code: C

Traditional Ball type linear guide, producing double the speed of slide contact with neighboring balls in different directions for spinning effects. Extremely high friction greatly reduce service life; also, the contact point between balls produce high pressure and noise, and increase the possibility of damagers of film cladding.

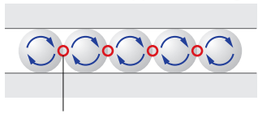


Low noise ball chain



The contact point is between balls and ball chain, so the surface pressure is low.

Traditional Ball type linear guide



The Ball type linear guide's contact point is only between balls, thus the surface pressure is high.

* **cpc** Ball Chain can provide greater contact area between ball and ball chain, so film cladding will eliminate damage and lower noise volume. Balls can move at higher speed and extend its service life.

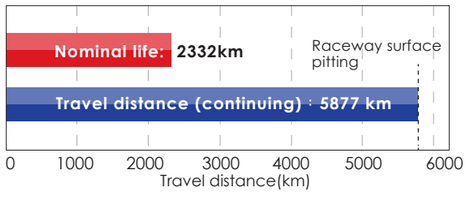
* The size of the ball chain design block is as the same as the normal type, and therefore it can use thesame rail.

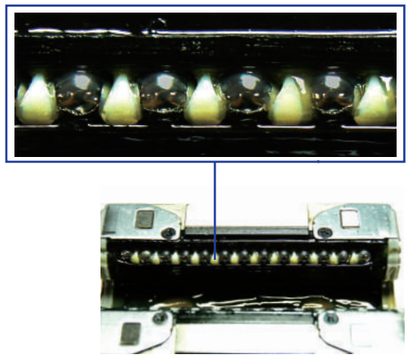
Heavy load test

Condition

Model：ARC25MN SZC V1H
Velocity：1m/sec
Load capacities：7.44kN(0.3C)
Dynamic load rating C_{100}：24.8kN
Stroke：960mm
Preload：0.05C

Rating Life $\left(\frac{C}{P}\right)^3 \times 100km = \left(\frac{C}{0.05C+0.3C}\right)^3 \times 100km = 2332km$

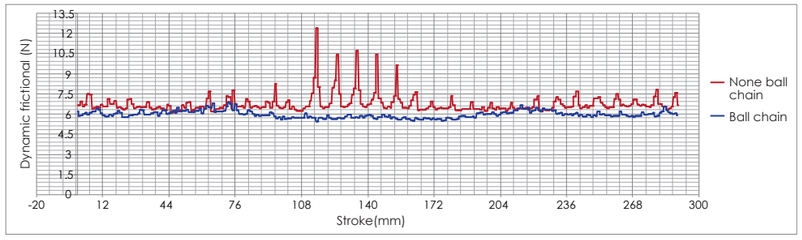




After testing, grease remains and no anomaly in the balls and grease.

Smoothness test

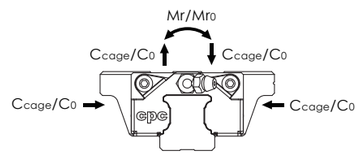
Model code：ARC25MNSV1N
Velocity：10 mm/sec

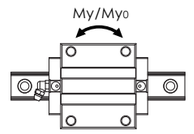


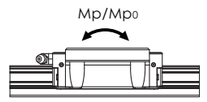
Load capacity of ball chain

There are three advantages of ARC/HRC/ERC series with ball chain in compare with traditional block without ball chain:

1. The spaceblock of ball chain can prevent the oil film from rupturing by neighboring balls' contact and decrease the wear by strong friction.
2. The retainer of ball chain can maintain good quality of oil film by continously applying grease on the moving part.
3. The ball chain provides the function of the moving and leading the steel balls. The block without ball chain, its steel balls are pushed by the back steel balls while entering the raceway, so the contact angle between balls and rail is uncertain, and also easy to cause vibration and increase the stress. The block with ball chain, its balls are led by ball chain, so it can fit correctly while entering the raceway and the contact angle will be accurate. Ball chain provides smooth running, less vibration and less stress.







Dynamic rating load

The attached right table shows the C_{cage} and C_{ISO} value via testing from different type of machines.
(According to ISO-14728 regulations)

Model Code		C_{ISO} (kN)	C_{cage}(kN)
ARC-MN C ARC-FN C HRC-MN C HRC-FN C ERC-MN C	15	9.4	11.8

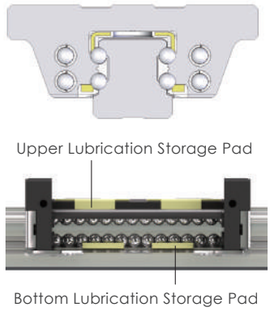
Product Design (option)

Lubrication Design (Ordering Code: Z) (ARC/HRC)

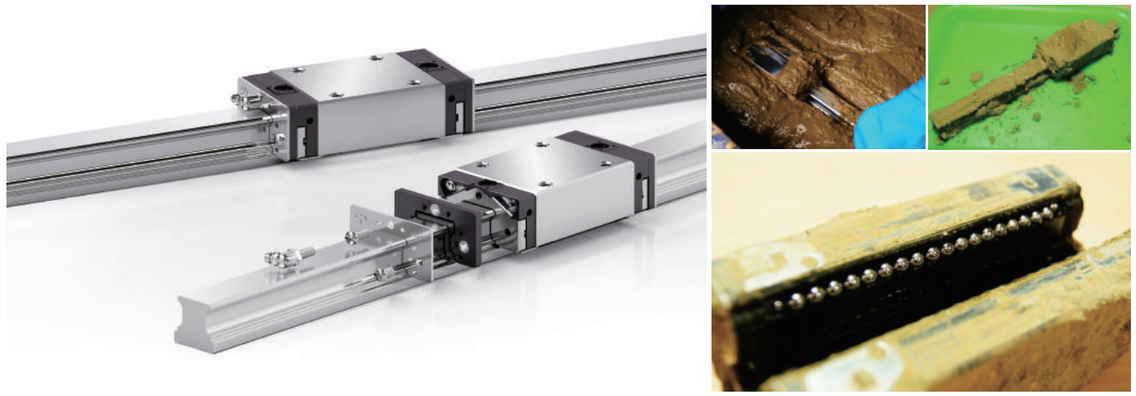
Inner oil storage and oil supply system design

Inner PU Lubrication Storage Pad design does not increase length of runner block and can contact directly with all balls. Customer can inject lubrication oil through lubrication holes and can save enough lubrication oil within the PU Lubrication storage pad to ensure long term lubrication effects, conforming to environment protection needs and lowering maintenance costs. Excellent performance when used in short stroke.



External NBR Seal with Metal Scraper (Ordering Code: SN) (ARC/HRC/ARR/HRR/LRR)

Available for applications in harsh environment such as grinding machine, glass working machine, graphite machine, wood-working machinery, dust-proof solution



Dimensions and Specifications

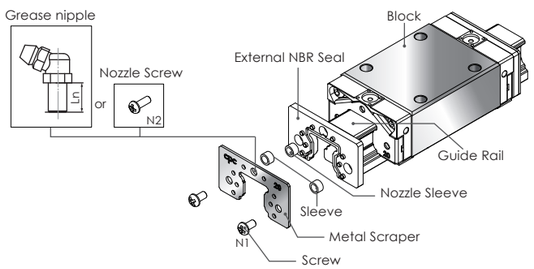
Installation manual

1. Set block on the rail before installing external NBR seal.
2. Make sure rubber part is fitted in the sleeve. If rubber parts fall off, please set the sleeve to the correspondent bore.
3. Overlap rubber part and metal scrapper with the corresponding salient point and the bore. cpc logo must be facing outward.
4. Slide the external NBR seal into rail from two sides and closely connect with the block.
5. Fasten screw into the correspondence bore. Make sure the seal is centre aligned with the rail while fastening. Do not make metal scraper contact with guide rail.



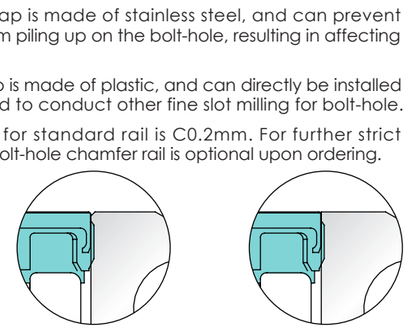
Metal-Plastic-Cap Patent Design for Standard Rail-Bolt-Hole (With patent)

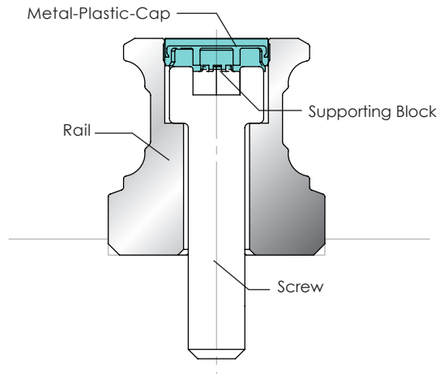
(Ordering Code: MPC)

Metal Cap Features Introduction

The Most Convenient Metal Cap Used in Industry

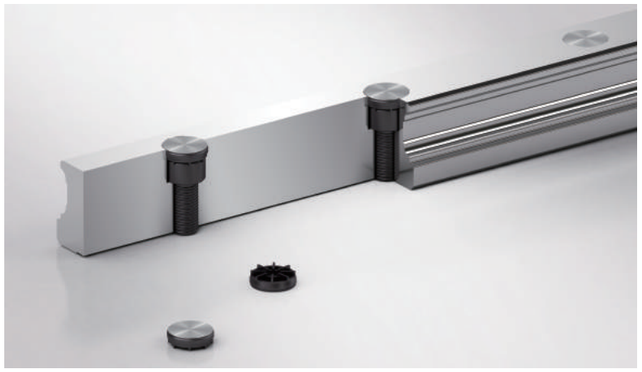
- The upper part of the cap is made of stainless steel, and can prevent sharp foreign objects from piling up on the bolt-hole, resulting in affecting the end seal function.
- The lower part of the cap is made of plastic, and can directly be installed on standard rail, no need to conduct other fine slot milling for bolt-hole.
- The bolt-hole chamfer for standard rail is C0.2mm. For further strict dustproof request, non-bolt-hole chamfer rail is optional upon ordering.

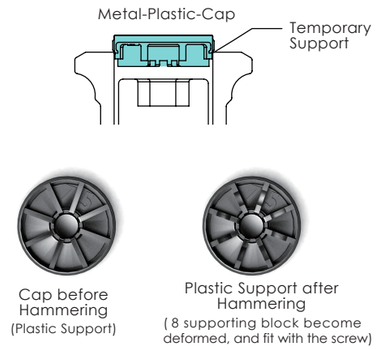




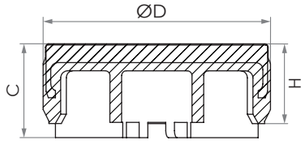
Cap can be Smoothly Installed on Bolt-Hole

Bolt-hole cap of conventional linear guides, due to not having good control in hammering, results in cap being hammered too deep or unevenness, and will accumulate dirt or scrap iron easily. cpc cap is especially designed with supporting block to prop up the cap, fixing with the screw stably, and thus prevent sinking.





Dimensions and Specifications



Model Code	Screw	External Diameter D	Cup Height H	Block Height C	Rail

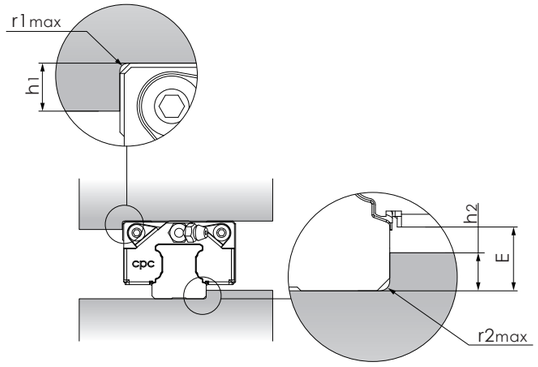
Installation Notice

Dimension of reference edge

To ensure the linear guide is precisely assembled with machine table, **cpc** machines a recess in the reference edge corner. The corner of the machine table must be smaller than the chamfer of the linear guide to avoid interference.



Unit : mm

Rail Joint

The standard length of rail is 4 meter, **cpc** provides rail joint solution. The joint number will be laser mark on the rail.

1. Follow the joint number to assemble. (Shown in figure A)
2. In the case of two more numbers of rail on the same moving axis, **cpc** suggests to set the joint in different position to avoid the change in accuracy. (Shown in figure B)
3. Follow the recommend tightening torques to fasten the screws from inside to outside.

Figure A

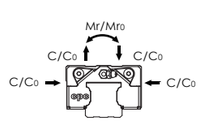
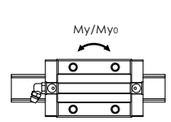
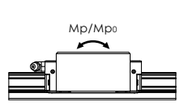
1. The load capacities is for full-ball type (without ball chain)
2. N_2 = Injecting holes
3. N_3 = O-ring size for lubrication from above
4. N_2 ,N_3 will be seal before shipmant, open it when using product.







The above rating load capacities and static moment are calculated according to ISO14728 standard. The rating life for basic dynamic load rating is defined as the total 100km travel distance that 90% of a group of identical linear guides can be operated individually under the same conditions free from any material damage caused by rolling fatigue. When the standard of 50km travel distance is applied, the above basic dynamic load rating C of ISO 14728 should be multiplied by 1.26 for conversion.

1. The load capacities is for full-ball type (without ball chain)
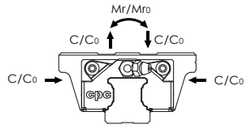
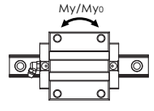
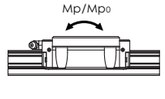
2. N2 = Injecting holes
3. N3 = O-ring size for lubrication from above
4. N2 ,N3 will be seal before shipmant, open it when using product.







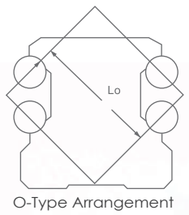
The above rating load capacities and static moment are calculated according to ISO14728 standard. The rating life for basic dynamic load rating is defined as the total 100km travel distance that 90% of a group of identical linear guides can be operated individually under the same conditions free from any material damage caused by rolling fatigue. When the standard of 50km travel distance is applied, the above basic dynamic load rating C of ISO 14728 should be multiplied by 1.26 for conversion.

Product Overview

AR/HR/ER Lightweight Linear Guide Product Characteristics

cpc lightweight Ball Type Linear Guide Series adopt the O-type arrangement for the four row ball circulation design featuring high load and high stiffness. The contact angle between the rail and the ball is 45 degrees and realizes the 4 directions equal load capacity.
Among the AR/HR/ER Lightweight Linear Guide, two of the four circulation channels are positioned within the plastic accessories, reducing 10~20% of the block weight.
Stainless steel reinforcement plate has scraper function and the L design fastens the screws onto the top and bottom of the runner block, which reinforces the rigidity of end caps and cladding; further enables the high speed movement of products.
AR/HR/ER Lightweight Linear Guide mainly provide the preload class VC and V0 etc. to enhance the tolerance of dimension and convenience of customers' processed components and even reduce the cost of manufacturing work.

- Tolerance of velocity
- Four directions equal load capacity
- Adopting the same rail with ARC/HRC/ERC
- Lightweight block rotary hole design
- Processed accessories match tolerance of dimension
- Available for vertical (downward) and reverse (upward) bolting track rail



O-Type Arrangement

- Available for special surface treatment
- Excellent dynamic performance: Reach Vmax > 5m/s Reach amax > 300m/s²
- Dust protection of double wipe blade design in the end seal; have Standard type and reinforcement type

Technical information

Accuracy

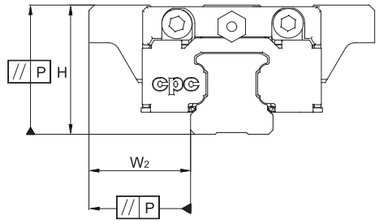


Table of accuracy

Accuracy grades (μm)		H	N
Tolerance of dimension height H	H	±40	±100
Variation of height for different runner Block on the same position of Rail	ΔH	15	30
Tolerance of dimension width W_2	W_2	±20	±40
Variation of width for different runner Block on the same position of Rail	ΔW_2	15	30

Please refer to P16 : Accuracy of the running parallelism graph

Preload and clerance

AR/HR/ER						
Class	Description	Preload Value	Clearance (μm)			Application
			15	20	25	
VC	Clearance	0	+10~+2	+10~+2	+11~+3	Smooth motion, low friction
V0	Light preload	0.02C	+2~-4	+2~-5	+3~-6	For precision situations, smooth motion

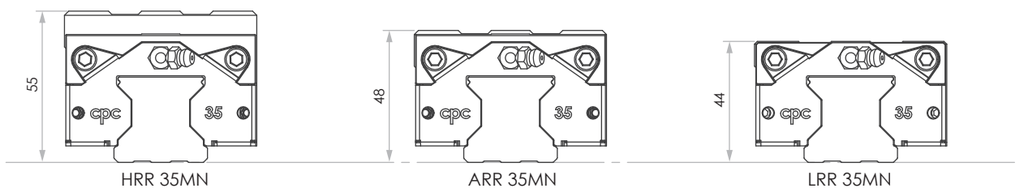
The dynamic load rating value with ball chain Ccage is the measured value (please refer to page 08). The above static load rating and the static moment are calculated according to the ISO 14728 standard.

Product Overview

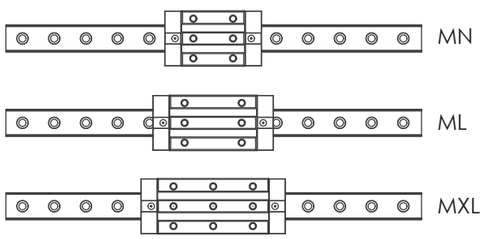
LRR Extremely Low Profile Type

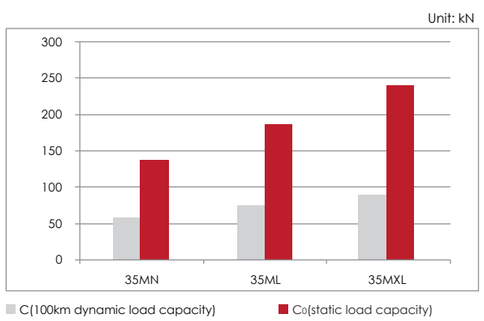
Compared to the industry's standard, with various combination and low center of gravity provides a more compact space, and is suitable for occasions that need to lower external torque and smaller inertial force. ARR, HRR, LRR's block, all share the same track, and with same load capacity and service life.

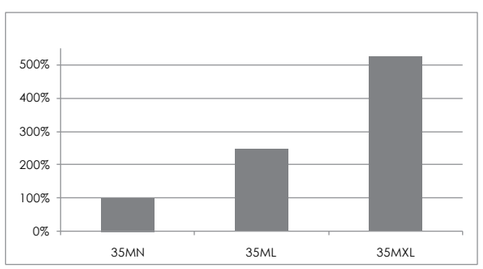


MXL Ultra Long Block Type

Compared to the industry's ML lengthened block, MXL is the model with a much lengthened block and can demonstrate a greater load capability and rigidity, and better shock reduction capability. It's suitable for machine tool that requires super high rigidity and accuracy.







Service Life(under same load)

Parts information

Low Noise Roller Chain (Optional)

Ball chain can effectively lower high frequency noise volume while sliding, and enhance smoothness. The ball chain spacer beteen steel rollers can continuously replenish the oil film cladding to maintain better lubrication effect.

(For more information please refer to page 07)

High Rigidity Stainless Steel Reinforcement Plate (Standard Feature)

L-shaped design is locked with end and bottom screw on block body respectively. The bottom of the body is equipped with integrated bolt, and can fix the reinforcement plate tightly to prevent plastic mountings from cracking and result in block damage.

(For more information please refer to page 06)

Full Cover Seal (Standard Feature)

All model type are equipped with "end seal", "bottom seal", "inner seal" and can effectively prevent foreigh objects from sliding into the block, and prevent lubrication from leaking out.

(For more information please refer to page 03)

Metal-Plastic-Cap (Standard Feature)

Stainless steel cover can demonstrate excellent friction resistance ability under harsh environment. Inside the hole plug is equipped with plastic fixed support, having easy installation characteristics, can directly be installed on the standard rail. Contact between support part and stigma screws can prevent over fastening while installation, and can prevent foreign objects from stacking while sliding as well.

(For more information please refer to page 10)

NBR Seal (Optional)

The seal can demonstrate high dustproof ability focusing on the fine dust working condition, such as wood-working machine, glass processing machine, graphite processing machine, and grinder. On the outer side of the seal is equipped with stainless steel scraper, and the clearance between inner contour and rail contour is only 0.2~0.3mm. This can prevent comparatively large foreign objects from damaging rubber seal.

(For more information please refer to page 09)

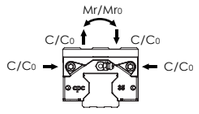
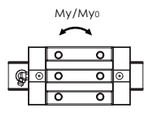
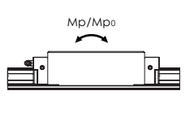
1. The load capacities is for full-ball type (without ball chain)
2. N_2 = Injecting holes
3. N_3 = O-ring size for lubrication from above
4. N_2 ,N_3 will be seal before shipmant, open it when using product.







The above rating load capacities and static moment are calculated according to ISO14728 standard. The rating life for basic dynamic load rating is defined as the total 100km travel distance that 90% of a group of identical linear guides can be operated individually under the same conditions free from any material damage caused by rolling fatigue. When the standard of 50km travel distance is applied, the above basic dynamic load rating C of ISO 14728 should be multiplied by 1.26 for conversion.

GP-PT1/8-01 Lubrication Kit

The Lubrication Kit is with a supply nozzle (GT-1/8-M5) and three kinds of different nozzle adaptors (GH-M5-MR, GH-M5-06, GH-M5-08).
The supply nozzle can be mount on the main body of common manual or pneumatic grease gun with PT1/8 tapped connector available on the market.

Main body of Grease Gun

Option for Main body of Grease Gun: GG-070 for 70g volume grease pack and GG-400 for 400g volume grease pack.

Unit: mm

Type	Dimension	Feature
GG-070		1. Pressure: 27Mpa 2. Output Volume: 0.5~0.7 c.c/stroke 3. Grease: Suitable for 70g volume grease pack or bulk loading
GG-400		1. Pressure: 62Mpa 2. Output Volume: 1.0~1.2 c.c/stroke 3. Grease: Suitable for 400g volume grease pack or bulk loading

cpc AR/HR Z Series Lubrication Storages Pad Testing Report

A linear guide is a category of rolling guidance, by using unlimited re-circulating stainless steel balls operate between the raceways of the rail and the block, result in the moving table achieving high precision and low friction linear movement.
If the linear guide do not have sufficient lubrication, rolling friction will increase, cause wear and shortened linear guide life span in long term operation.

cpc has added and embedded PU lubricant storage pads to lengthen linear guide operational life; the pads directly contact and lubricate the rolling balls. This design supplies sufficient lubrication even during short-stroke operations.

cpc's design, due to the embedded pad's absorption and retention capabilities, results in a product that features a long operational life and long-term lubrication.

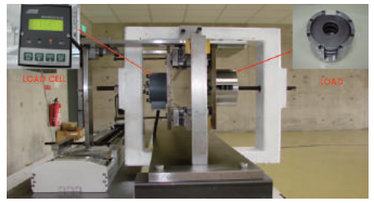
The following is the cpc in-house life test results:

AR15 Lubrication Storage Pad Testing Data

Testing products : AR15-Blocks with Lubrication Storages Pad 8pcs,
AR15-Rail-N-class-L1500mm 4pcs

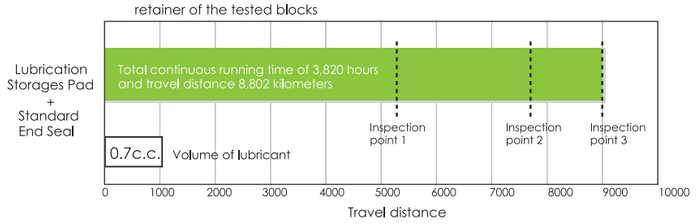
Testing condition	
Rating load capacities(each Block)	1.8KN(C=9KN、C0=17.5KN)
Stroke	0.96m
Max running speed	1m/s
Lubricant	DAPHNE SUPER MULTI 68 (Viscosity64.32 CST 40OC)
Lubrication period	No lubrication added during testing period

Testing equipment



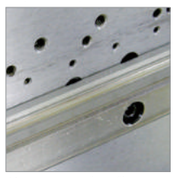
Testing result

Dried lubricant residue started appearing on rail profile, PU pads, and ball retainer of the tested blocks



Testing result of inspection point

Inspection point 1 and 2

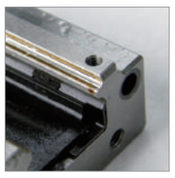


No wear on rail profile

Inspection point 3

some rail profiles have dried lubricant residue present

Inspection point 1 and 2 : Lubrication result

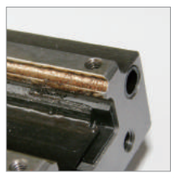


- Upward Lubrication Storages Pad in good condition

  lubricant supply in good condition
- Running profile of rail no wear out

- Downward Lubrication Storages Pad in good condition
- lubricant supply in good condition

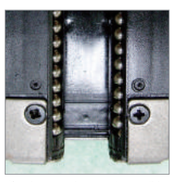
Inspection point 3 : Lubrication result



Dried lubricant residue started appearing broken on upward Lubrication Storages pad of the tested blocks

Dried lubricant residue started appearing broken on downward Lubrication Storages pad of the tested blocks

Plastic parts and end seal in good condition



Plastic parts in good condition

End seal in good condition

Test Summary

Total continuous running time of 3820 hours and travel distance 8802 kilometers.
Out of eight test blocks, dried lubricant residue appeared on 2 blocks and 1 rail. Dried lubricant residue is indicative of a need for re-lubrication.
The test results indicated that the lubrication pad design effectively extends re-lubrication requirement and thus lengthens linear operational life.
